

Atty. Docket No.: PALM.0881

Patent 10/404,584

IN THE SPECIFICATION

On page 5, line 22 through 6 2, line 5, replace the entire paragraphs with the paragraphs below, which show the changes made.

In addition, embodiments of the invention avoid the need of placing a cancellation function as menu item in an active menu. This conserves space for displaying other menu items. Furthermore, embodiments of the invention do not require the user to scroll among additional menu items in order to select the cancel menu function whenever the user wishes to cancel an active menu. As a result, embodiments of the invention avoid having to dedicate available display space on a compact housing for menu items ~~for menu items that cancel active~~ menus.

On page 12, lines 1-7, replace the entire paragraph with the paragraph below, which shows the changes made.

In a variation to the second embodiment, some applications executed on the handheld computer only provide for one menu to be available for a given page being displayed. Therefore, lateral navigation cannot activate ~~active~~ a second menu. Accordingly, an embodiment provides that when only one menu is available and active, lateral navigation makes the menu bar of that menu selectable. Subsequent selection of the menu bar causes that menu to be cancelled. Alternatively, lateral navigation when the only available menu is active may cancel that menu altogether.
